[16] California is home to the largest population of Native Americans in the United States, with well over 100 federally recognized and unrecognized tribes within the state, and the State's long history of genocide, land theft, oppression of tribal traditions and culture has had a devastating effect on the mental health of Native Americans. AI/AN communities have been greatly under- and un-counted in data collection efforts—including in the federal census. Consequently, a lack of quality data for AI/AN youth underestimates the burden of disease that AI/AN communities face and masks disparities compared to the general population or other groups.
